LANCASTER UNIVERSITY

A Heuristic population based method to solve the assymetrical TSP with time constraints

Arnaud Da Silva

36471977

Supervisor

Ahmed Kheiri

A thesis submitted in fulfillment of the requirements
for the degree of Master of Science Business Analytics

in the

Lancaster University Management School
Department of Management Science

September 2024

Declaration of Authorship

I, **AHMED**, hereby declare that this thesis entitled, **"Title"**, is all my own work, except as indicated in the text.

The report has been not accepted for any degree and it is not being submitted currently in candidature for any degree or other reward.

Date:

Abstract

(TODO) Give a short (1 page) overview of the work. This should summarise (not advertise) your research project. After reading the abstract the reader should know what problem you are tackling, the techniques you are using, the results you have achieved.

Chapter 1

Introduction

(TODO) Set the scenes. Explain why you are doing this work and why the problem being solved is difficult. Most importantly you should clearly explain what the aims and objectives of your work are.

(TODO) Structure of the thesis. Academic publications produced (if any), including any achievements/highlights

Chapter 2

Literature Review

2.1 What is optimisation?

2.1.1 Definition and Concept

Explain the concept of optimization in the context of operations research and decision-making.

2.1.2 Exact method vs Heuristic method

Discuss different types of optimization problems such as linear programming, integer programming, combinatorial optimization, and heuristics.

2.1.3 Some day to day optimisation problems

2.2 Population based heuristic

2.3 Dynamic programming

2.4 The different routing problems

2.5 The evolution of air transport in the last decades

2.5.1 Overall stats

2.5.2 The logistic and supply constraints

2.5.3 Day to day use of optimisation in air transport

(TODO) Present a survey of your main approach and an overview of the approaches proposed previously for solving the problem dealt with in this work

(TODO) Identify the practical and research motivation of this work and the literature gaps

(TODO) How convincing is the authors' argument? (Critical response - comparisons with other research, strengths or weaknesses but in relation to your research)

Chapter 3

Problem Description

3.1 Overview

3.2 Instances Description

(TODO) Present and explain your problem AHA in detail Assumptions should be stated clearly

Chapter 4

Solving the 14 instances using a heuristic

(TODO) Describe implementation details

Chapter 5

Results and performance

(TODO) Present the results and discuss any differences between the findings and your initial predictions/hypothesis

(TODO) Interpret your experimental results - do not just present lots of data and expect the reader to understand it. Evaluate what you have achieved against the aims and objectives you outlined in the introduction

Chapter 6

Conclusion

(TODO) Explain what conclusions you have come to as a result of doing this work. Lessons learnt and what would you do different next time. Please summarise the key recommendations at the end of this section, in no more than 5 bullet points.

6.1 Summary of Work

6.2 Critics

6.3 Future Work

(TODO) The References section should include a full list of references. Avoid having a list of web sites. Examiners may mark you down very heavily if your references are mainly web sites.

Chapter 7

Progress and next steps

7.1 Coding

7.1.1 title

-
